Summary

Results-driven Backend Developer specializing in building scalable distributed systems, RESTful microservices, and high-performance databases using Node.js and PostgreSQL. Proven expertise in implementing robust End-to-End (E2E) testing suites, securing API architectures, and collaborating within Agile teams to deliver reliable software solutions.

Education

October 6 University — 6th of October City, Egypt
Bachelor's Degree in Computer Science (CGPA: 3.4) — *2021 – 2025*

Experience

Matrix Minds IT — March 2026 – Present
Backend Developer Intern — *Remote*

- Architected and scaled backend services for a **Task Management Platform** and a **House Expenses mobile application** using Node.js and PostgreSQL.
- Implemented comprehensive **End-to-End (E2E)** testing strategies to validate critical user journeys, enhance API-token security, and ensure system reliability.
- Spearheaded core backend features, optimizing relational data schemas and query performance, which improved overall feature delivery speed by **20%**.
- Collaborated within a cross-functional engineering team utilizing Git workflows, branch isolation, and peer code reviews.

iSchool — June 2026 – August 2026
Programming & Robotics Instructor — *On-site*

- Delivered interactive programming and VEXcode VR robotics lessons to Grade 4, 5, and 6 students across designated locations, breaking down complex logic into digestible concepts.
- Guided students through hands-on coding challenges and physical setups, fostering problem-solving skills and computational thinking in an engaging in-person environment.

Regional Training Sector, Ministry of Water Resources and Irrigation — July 2024 – August 2024
Data Analyst Intern — *Giza, Egypt*

- Analyzed 1000+ rows of environmental data using Python, improving data processing accuracy by **15%**.
- Assisted a team of **5+** members to support efficient project execution and milestones.
- Enhanced predictive models for water quality analysis, increasing prediction precision by **12%**.
- Managed version control and codebase tracking using Git, ensuring **100%** data integrity across collaborative data analytics pipelines.

Projects

POSGRESTORE – E-Commerce Inventory Dashboard | Live Demo — August 2026 – Present

- Engineered a high-performance inventory dashboard using Serverless PostgreSQL (Neon DB) with connection pooling and server-side SQL aggregations for zero-latency metrics calculation.
- Secured RESTful APIs using JWT authentication, bcrypt password hashing, Helmet HTTP hardening, and Arcjet rate-limiting/bot protection middleware.
- Integrated Cloudinary CDN pipelines for optimized image management and built custom streaming endpoints for server-side CSV data exports.
- Developed a responsive frontend with React 19, Tailwind CSS, and Zustand for state management, including multi-theme support and resilient token-based authentication workflows.

Kevta – Task & Board Management Platform | *Node.js, PostgreSQL, Jest* March 2026 – Present

- Developed and scaled backend services using Node.js and PostgreSQL, designing relational database schemas that support secure, multi-tenant workspace isolation.
- Implemented comprehensive End-to-End (E2E) testing strategies using Jest and Supertest to ensure high-reliability user journeys, robust API authentication, and system-wide security.
- Engineered core collaborative features, including real-time task management and automated data persistence, ensuring seamless user experiences across distributed teams.
- Collaborated on optimizing application performance and security workflows, consistently contributing to complex feature delivery and cross-functional code reviews.

Bucketer Application | *Node.js, Express.js, E2E Testing* May 2026 – Present

- Developed robust backend architecture and scalable RESTful APIs to support core bucketer management workflows and data operations.
- Implemented comprehensive End-to-End (E2E) testing suites to validate system functionalities, data integrity, and secure user interactions.
- Optimized backend performance and query execution, ensuring seamless data retrieval and high system reliability under active usage.

Training & Certifications

Claude 101 & Claude Code 101 Certifications | *Anthropic* June 29, 2026
Back-End Online Training | *Matrix Minds IT (Node.js & RESTful API Architecture)* March 2026 – Present
Backend Diploma in PHP & Laravel | *Route IT Training Center* October 2024 – April 2025

Technical Skills

Languages & Systems: JavaScript, TypeScript, Python, C++, PHP, HTML5, CSS3, SQL (PostgreSQL, Neon DB, MySQL)
Frameworks & Libraries: Node.js, Express.js, Laravel, React 19, Next.js, Zustand, Tailwind CSS, DaisyUI, Socket.io, Jest, Supertest
Databases & Security: PostgreSQL, Neon DB, MongoDB, MySQL, Arcjet, Helmet, JWT, Bcrypt
Developer Tools & Cloud: Git, GitHub, VS Code, Postman, Cloudinary CDN, Cloud Hosting
Methodologies & Concepts: Agile Development, Object-Oriented Programming (OOP), Data Structures, RESTful Architecture, API Design, E2E Testing, Version Control (Git, GitHub)
Languages: Arabic (Native), English (Very Good)
